HOW TO OPERATE AUTOMATIC SELF FILLING FOUNTAIN PEN

Hold pen in upright position with point submerged in fountain pen ink, work filler lever back and forth two or three times expelling all air from tube and giving tube the fullest ink capacity before bringing back lever.

To clean pen use a few drops of ammonia in cold water, thoroughly flushing out the tube. To keep in first class condition, pen should be thoroughly cleansed before re-filling.

HOW TO OPERATE AUTOMATIC PENCIL

This pencil if handled properly, will last for years as it is simple in construction and there is nothing to get out of order.

The lead is propelled forward or repelled backward by turning the top. The eraser is under the cap, which pulls off easily. The extra supply of leads is under the eraser. To insert new lead, pencil should be turned way down. Push lead in firmly until it catches in the repelling chamber.

Certificate of Guarantee

Every Fountain Pen or Pencil made by us is guaranteed to give absolutely satisfactory service, if directions for use are carefully followed.

In the event of any dissatisfaction, this Certificate entitles you to return this Pen or Pencil to us, and we will adjust same or give you a new one without charge. It is important that you return all parts of the Pen or Pencil sent for repair as we will not supply new parts unless the old parts accompany the repair. This guarantee does not cover careless or violent handling and consequent breakage.
